

# piSAVE® sense 02/60 (yellow), 10p, 02.02.394

- Vacuum check valves which allows a few suction cups to miss the object(s) and still maintain enough vacuum level in the system with quick response and release times.
- The vacuum check valves shall be used in a centralized vacuum system, one for each suction cup.
- Designing with vacuum check valves will require a smaller vacuum pump and save energy.
- Also suitable for objects with surface leakage around the lip of the suction cup.
- Available in four sizes with different flow performance/characteristics to suit different degree of leakage on handled material and different size of cups.
- The valves are supplied separately for integration or mounted in an Al-fitting with female and male threaded connections to facilitate installation.

## General

Material	HNBR, Thermoplastic Polyurethane (TPE-U)
Pump flow/cup minimum	2.12 scfm
Pump flow/cup to close valve	44.5 scfm
Temperature	-4 – 176 °F
Valve colour	Yellow
Weight	0.01 oz

## Spare parts

	Part no.
